

# Contents

1	Introduction . . . . .
<b>I General categories</b>	
2	Definition . . . . .
3	Functors . . . . .
4	Natural transformations . . . . .
5	Equivalences of categories . . . . .
6	Adjoint functors . . . . .
7	Limits . . . . .
8	Limits and adjoint functors . . . . .
<b>II Additive and abelian categories</b>	
9	Additive categories . . . . .
10	Kernels and cokernels . . . . .
11	Abelian categories . . . . .
12	Exact sequences, pullbacks and pushouts . . . . .
13	Some diagram lemmas . . . . .
<b>III Hom and <math>\otimes</math></b>	
14	Hom, projectives and injectives . . . . .
15	Tensor products . . . . .
16	Hom-tensor adjunction . . . . .
<b>IV Complexes and homology</b>	
17	The long exact sequence of homology . . . . .
18	Cones and quasi-isomorphisms . . . . .
19	Homotopy . . . . .
20	Projective and injective resolutions . . . . .

**V Derived functors**

- 21 Definition and first properties . . . . .
- 22 Syzygies and dimension shift . . . . .
- 23  $\text{Ext}^1$  and extensions . . . . .
- 24 Total complexes - balancing Tor and Ext . . . . .
- 25 Small global dimension . . . . .

**VI Triangulated categories**

- 26 Motivation – triangles in homotopy categories . . . . .
- 27 Definition . . . . .
- 28 Homotopy categories are triangulated . . . . .
- 29 Derived categories . . . . .
