# Summary Lecture 20: Complex (power) series

Complex series and sequences:

Definitions, results and proofs – similar to real case

Convergence, absolute convergence, divergence

Comparison, ratio, and root test; divergence test; geometric series

Complex power series:

$$\sum_{n=0}^{\infty} a_n (z-z_0)^n = a_0 + a_1 (z-z_0) + a_2 (z-z_0)^2 + \dots$$

Center  $z_0$ , coefficients  $a_n$ ,  $(z-z_0)^0=1$  by definition

Convergence in  $z_1 \Rightarrow$  convergence in z for all  $|z-z_0| < |z_1-z_0|$ 

Divergence in  $z_2$   $\Rightarrow$  divergence in z for all  $|z - z_0| > |z_2 - z_0|$ 

3 Radius of convergence R:

Distance  $R = |z_0 - z^*|$  to nearest point  $z^*$  where power series diverges

Always exists; series converges (diverges) if  $|z - z_0| < R$  (> R)

Cauchy-Hadamard:  $R = \lim_{n \to \infty} \left| \frac{a_n}{a_{n+1}} \right|$  when the limit exists

# Lecture 21: Complex power series

Kreyszig: Sections 15.3, 15.4

- Term wise operations on power series
- Power series representation of functions
- Taylor's formula, Taylor series, definition and convergence
- Examples

#### Lecture 21: Termwise operations on power series

$$c_1 \sum_{n=0}^{\infty} a_n z^n + c_2 \sum_{n=0}^{\infty} b_n z^n = \sum_{n=0}^{\infty} (c_1 a_n + c_2 b_n) z^n \ [R = \min(R_a, R_b)]$$

$$\left(\sum_{n=0}^{\infty} a_n z^n\right)' = \sum_{n=1}^{\infty} n a_n z^{n-1}$$
 [R = R<sub>a</sub>]

$$\int \left(\sum_{n=0}^{\infty} a_n z^n\right) dz = \sum_{n=0}^{\infty} \frac{a_n}{n+1} z^{n+1} + C \qquad [R = R_a]$$

ERJ (NTNU) TMA4120 Mathematics 4K November 1, 2021

3 / 7

### Lecture 21: Represent functions by power series

Represents their sum where they converges

Uniqueness:

$$\sum_{n=0}^{\infty} a_n z^n = \sum_{n=0}^{\infty} b_n z^n \quad \Rightarrow \quad a_n = b_n, n = 0, 1, 2, \dots$$

The sum is analytic where the power series converges

#### Lecture 21: Taylor's formula, Taylor series

Taylor series: 
$$f(z) = \sum_{n=0}^{\infty} a_n (z - z_0)^n$$
,  $a_n = \frac{1}{n!} f^{(n)}(z_0)$ 

Taylor's formula: 
$$f(z) = \sum_{n=0}^{\infty} a_n (z - z_0)^n + R_m(z, z_0)$$

#### Taylor's theorem:

f analytic in domain D and  $z_0 \in D$ 

 $\implies$  the Taylor series of f about  $z_0$  exists, is unique, and converges to f in the largest open disc about  $z_0$  where f is analytic

ERJ (NTNU)

### Summary Lecture 21: Complex power series

Termwise operations on power series:

$$\left(\sum_{n=0}^{\infty} a_n z^n\right)' = \sum_{n=1}^{\infty} n a_n z^{n-1}$$
 [R = R<sub>a</sub>]

$$\int \left(\sum_{n=0}^{\infty} a_n z^n\right) dz = \sum_{n=0}^{\infty} \frac{a_n}{n+1} z^{n+1} + C \qquad [R = R_a]$$

Representation of functions by power series:

Represents their sum where they converges

Uniqueness: 
$$\sum_{n=0}^{\infty} a_n z^n = \sum_{n=0}^{\infty} b_n z^n \quad \Rightarrow \quad a_n = b_n, n = 0, 1, 2, \dots$$

The function is analytic where the power series converges

# Summary Lecture 21: Complex power series

Taylor series:

$$f(z) = \sum_{n=0}^{\infty} a_n (z - z_0)^n, \qquad a_n = \frac{1}{n!} f^{(n)}(z_0)$$

Taylor's theorem:

If f is analytic in a domain D and  $z_0 \in D$ , then

- (a) the Taylor series of f about  $z_0$  exists and is unique,
- (b) and it converges and equals f in the largest open disc about  $z_0$  where f is analytic
