

Commentary from meeting with reference group 4. okt 2013, TMA4205 Numerical Linear Algebra

There: Håkon Marthinsen, Andre Flakke, Elisabeth Topnes

Progress:

Questionary from the lecture was went through in order to map students' opinion on the course. After being went through with the lecturer, the following measures were considered feasible:

- It is an advantage with the course “TMA4212 Numerical solution of differential equations with difference methods” as a recommended course in the course description.
- Put out material that is planned went through 1 day before lecture on homepage
- Refer to web pages for graphics
- Questions to the audience: not too hard/easy, relevant
- Point out strong/weak sides to the algorithms
- Try to make the exercise hours into demonstrations, partly. Maybe 15 minutes of the class
- Improve flow between topics. Give reasons for why new topics are brought up.
- Can repeat Krylow spaces before exam, as some found this hard
