Contents

Preface	3
 Chapter 1. Introduction 1.1. Purpose of the book 1.2. The class of PDEs discussed in the book 1.3. Operator splitting for initial-value problems 1.4. Operator splitting for convection-diffusion equations 1.5. Rigorous analysis of operator-splitting methods 1.6. Topics not treated in the book 1.7. Organization of the book 1.8. MatlabTM programs A guide to the reader 	$egin{array}{c} 7\\ 9\\ 10\\ 11\\ 12\\ 13\\ 14\\ 15\\ 16\\ 17 \end{array}$
Notation	
Chapter 2. Simple Examples of Semi-Discrete Operator Splitting	23
 Chapter 3. General Convergence Theory 3.1. Mathematical preliminaries 3.2. Degenerate parabolic equations 3.3. Weakly coupled systems of degenerate parabolic equations 3.4. A general convergence theory Chapter 4. Convergence Results for Convection-Diffusion Problems 4.1. A semi-discrete splitting method 4.2. A fully discrete splitting method 	$31 \\ 32 \\ 35 \\ 39 \\ 41 \\ 51 \\ 51 \\ 55 \\ 70 \\ 70 \\ 70 \\ 70 \\ 70 \\ 70 \\ 70$
4.3. Nonlinear error mechanisms4.4. Viscous splitting with a posteriori flux splitting	$\frac{70}{74}$
Chapter 5. Error Estimates for Hyperbolic Problems5.1. Multidimensional scalar conservation laws5.2. Weakly coupled systems of conservation laws	83 83 107
 Chapter 6. Operator Splitting for Systems of Equations 6.1. Operator splitting in porous media flow 6.2. Dimensional splitting for systems of conservation laws 6.3. Operator splitting for balance laws 6.4. Final remarks 	$125 \\ 125 \\ 137 \\ 144 \\ 154$
Appendix A. A Crash Course in Numerical Methods for Conservation LawsA.1. Hyperbolic conservation laws	$\begin{array}{c} 157 \\ 157 \end{array}$

CONTENTS

A.2.	Finite-volume methods	159
A.3.	Conservative methods	159
A.4.	A few classical schemes	160
A.5.	Convergence of conservative methods	164
A.6.	High-resolution Godunov methods	166
A.7.	Front tracking	174
Bibliography		179
Index		195
