

**Oppgave 18**

Gitt initialverdiproblemet

$$y^2 \frac{dy}{dx} = x^2 + 2x + 1$$
$$y(1) = 2.$$

Siden dette er en separabel differentisaalikning, får vi

$$3y^2 dy = 3(x^2 + 2x + 1) dx$$
$$\int 3y^2 dy = 3 \int (x+1)^2 dx$$
$$y^3 = (x+1)^3 + C$$
$$2^3 = (1+1)^3 + C \Rightarrow C = 0$$
$$y = x + 1.$$
