TMA4267 Linear statistical models

20. march 2025

Today and next time

Three scientific publications (2004, 2005, 2012) illustrating the use of 2-level factorial experiments, and motivating the theory that we cover in TMA4267

23 full factorial design, duplicated

Wikipedia:

Biosorption can be defined as the ability of biological materials to accumulate heavy metals from wastewater through metabolically mediated or physico-chemical pathways of uptake.^[2] Though using biomass in environmental cleanup has been in practice for a while, scientists and engineers are hoping this phenomenon will provide an economical alternative for removing toxic heavy metals from industrial wastewater and aid in environmental remediation.

- Aim: Removal of Cr³⁺ (and Cr⁶⁺)
- Design: 2³ factorial design
- Factors:

T: temperature (29 and 55 degrees celcius)

C: metal concentration (10 and 1200 mg/L)

pH: pH (2.0 and 6.0)

• Response: Efficiency of chromium removal after 6h exposition time

Table 2 Experimental factorial design results for Cr³⁺

| Factor | | | Species | | | | |
|----------------|----|-------------------------------------|------------------|-------------|------|--|--|
| \overline{T} | C | pН | Cr ³⁺ | | | | |
| | | Removal efficiency (%) ^a | | Average (%) | | | |
| 1 | 1 | 1 | 75.2 | 74.8 | 75.0 | | |
| 1 | 1 | -1 | 11.4 | 5.4 | 8.4 | | |
| 1 | -1 | 1 | 62.7 | 56.4 | 59.6 | | |
| 1 | -1 | -1 | 82.9 | 83.5 | 83.2 | | |
| -1 | 1 | 1 | 99.5 | 99.5 | 99.5 | | |
| -1 | 1 | -1 | 2.5 | 17.3 | 9.9 | | |
| -1 | -1 | 1 | 62.3 | 68.9 | 65.6 | | |
| -1 | -1 | -1 | 73.4 | 74.2 | 73.8 | | |

^a Experiments in duplicate.

Main and interaction effects

From the note Design of experiments, J. Tyssedal

Definition of main effect:

For two-level designs we define the main effect of a factor as: Expected average response when the factor is on the high level – expected average response when the factor is at the low level.

Table 2 Experimental factorial design results for Cr³⁺

| Factor | | | Species | | | | |
|----------------|----------------|----|-------------------------------------|------|-------------|--|--|
| \overline{T} | \overline{C} | pН | Cr ³⁺ | | | | |
| | | | Remo efficie (%) ^a | | Average (%) | | |
| 1 | 1 | 1 | 75.2 | 74.8 | 75.0 | | |
| 1 | 1 | -1 | 11.4 | 5.4 | 8.4 | | |
| 1 | -1 | 1 | 62.7 | 56.4 | 59.6 | | |

| -1 | 1 | 1 | 99.5 | 99.5 | 99.5 | | |
| -1 | 1 | -1 | 2.5 | 17.3 | 9.9 | | |
| -1 | -1 | 1 | 62.3 | 68.9 | 65.6 | | |
| -1 | -1 | -1 | 73.4 | 74.2 | 73.8 | | |

^a Experiments in duplicate.

Main and interaction effects

From the note Design of experiments, J. Tyssedal

Definition of main effect:

For two-level designs we define the main effect of a factor as: Expected average response when the factor is on the high level – expected average response when the factor is at the low level.

Definition

The interaction between two factors is defined as: Half the main effect of a factor when the other is on the high level – half the main effect of a factor when the other factor is at its low level.

Table 2 Experimental factorial design results for Cr³⁺

| Factor | | Species | | | | | |
|------------|---------------|---------|------------------|------|---------|--|--|
| T C pH | | | Cr ³⁺ | | | | |
| | | | Remo | val | Average | | |
| | | | efficie | ncy | (%) | | |
| | | | (%) ^a | | | | |
| 1 | 1 | 1 | 75.2 | 74.8 | 75.0 | | |
| 1 | 1 | -1 | 11.4 | 5.4 | 8.4 | | |
| 1 | -1 | 1 | 62.7 | 56.4 | 59.6 | | |

23 full factorial design

Example 2: Phosphate removal from water by fly ash: Factorial experimental design

Table 1 Values of operating variables used in the designed set of experiments

| Operating variable | -1 | 1 |
|---|-----|-----|
| x_1 (phosphate concentration) (mg l ⁻¹) | 25 | 50 |
| x_2 (fly ash dosage) (g l ⁻¹) | 0.5 | 2 |
| $x_3 (pH_0)$ | 2.9 | 5.5 |

Table 3
Experimental results of 2³ designs for the % E

| Experiments | x_1 | x_2 | x_3 | Y_1 |
|-------------|-------|-------|-------|-------|
| 1 | -1 | -1 | -1 | 17.16 |
| 2 | 1 | -1 | -1 | 1.5 |
| 3 | -1 | 1 | -1 | 99.41 |
| 4 | 1 | 1 | -1 | 41.22 |
| 5 | -1 | -1 | 1 | 26.4 |
| 6 | 1 | -1 | 1 | 1.1 |
| 7 | -1 | 1 | 1 | 99.6 |
| 8 | 1 | 1 | 1 | 49.56 |

Example 2: Phosphate removal from water by fly ash: Factorial experimental design

Table 1 Values of operating variables used in the designed set of experiments

| Operating variable | -1 | 1 |
|---|-----|-----|
| x_1 (phosphate concentration) (mg l ⁻¹) | 25 | 50 |
| x_2 (fly ash dosage) (g l ⁻¹) | 0.5 | 2 |
| $x_3 \text{ (pH}_0)$ | 2.9 | 5.5 |

Table 4 Results of regression analyzing for % E (Y_1)

| | Coefficient | S.E. | t-value |
|-------------|-------------|----------|----------|
| Intercept | 41.99375 | 0.134519 | |
| x_1 | -18.6488 | 0.134519 | -138.633 |
| x_2 | 30.45375 | 0.134519 | 226.3903 |
| x_3 | 2.17125 | 0.134519 | 16.14086 |
| x_1x_2 | -8.40875 | 0.134519 | -62.5098 |
| $x_1x_2x_3$ | 2.22375 | 0.134519 | 16.53114 |

Example 3: Computational run time

Recall our 2² experiment:

y: computation run time of algorithm that samles m poisson variables and returns an average

A: for loop or built-in Poisson(m)

B: sum/length or built-in mean

Design:

| | Α | В | AB |
|---|----|----|----|
| 1 | -1 | -1 | 1 |
| 1 | -1 | 1 | -1 |
| 1 | 1 | -1 | -1 |
| 1 | 1 | 1 | 1 |

Problem: We have to use two different computers (for some reason...)

Blocking in 23: using example 1

2 blocking factors: try TCpH and CpH

- TCpH = 1, CpH = 1
- TCpH = -1, CpH = 1
- TCpH = 1, CpH = -1
- TCpH = -1, CpH = -1

Tmp Conc pH Tmp:Conc Tmp:pH Conc:pH Tmp:Conc:pH

| 1 | 1 1 | 1 | 1 | 1 | 1 |
|----|-------|----|----|----|----|
| 1 | 1 -1 | 1 | -1 | -1 | -1 |
| 1 | -1 1 | -1 | 1 | -1 | -1 |
| 1 | -1 -1 | -1 | -1 | 1 | 1 |
| -1 | 1 1 | -1 | -1 | 1 | -1 |
| -1 | 1 -1 | -1 | 1 | -1 | 1 |
| -1 | -1 1 | 1 | -1 | -1 | 1 |
| -1 | -1 -1 | 1 | 1 | 1 | -1 |

Note: first column (T) equal in all blocks! Now temperature is also confounded...

Blocking in 23: using example 1

2 blocking factors: try TC and TpH

| Tmp C | onc pl | 1 Tmp:Conc | Tmp:pH | Conc:pH | <pre>Tmp:Conc:pH</pre> |
|-------|--------|------------|--------|---------|------------------------|
|-------|--------|------------|--------|---------|------------------------|

| 1 | 1 1 | 1 | 1 | 1 | 1 |
|----|-------|----|----|----|----|
| 1 | 1 -1 | 1 | -1 | -1 | -1 |
| 1 | -1 1 | -1 | 1 | -1 | -1 |
| 1 | -1 -1 | -1 | -1 | 1 | 1 |
| -1 | 1 1 | -1 | -1 | 1 | -1 |
| -1 | 1 -1 | -1 | 1 | -1 | 1 |
| -1 | -1 1 | 1 | -1 | -1 | 1 |
| -1 | -1 -1 | 1 | 1 | 1 | -1 |

Note: none of the main effects are confounded

Note: all two-factor interactions are confounded
